SUMMARY

Computer Science undergraduate with strong foundations in DSA, OOP, OS, CN, and DBMS. Proficient in C++, Python, and SQL, with experience in networked applications, machine learning. Conducted technical research at NSTL-DRDO.

EDUCATION

Indian Institute of Information Technology, Agartala

Agartala, Tripura

Computer Science and Engineering (CGPA: 8.75)

Aug. 2023– May 2027

Fiitjee Junior College

Visakhapatnam, Andhra Pradesh

XI and XII (State Board) (Aggregate Percentage: 92.8)

2021-2023

Sri Prakash Vidyaniketan

Visakhapatnam, Andhra Pradesh

X (CBSE) (Aggregate Percentage: 93)

2020

EXPERIENCE

Project Intern at NSTL-DRDO

Dec 2025 – Jan 2026

Naval Science and Technological Laboratory-DRDO

Visakhapatnam, Andhra Pradesh

- Developed a Physics-Informed Neural Network (**PINN**) with 5,403 trainable parameters to solve incompressible Navier–Stokes flow around a cylinder at $Re = 5$, predicting x-velocity, y-velocity, and pressure.
- Sampled 2,000 LHS collocation points and 4,300 boundary points, incorporating continuity, momentum, no-slip, free-stream, and pressure-reference constraints through automatic differentiation.
- Trained for 4,000 Adam epochs followed by L-BFGS optimization (up to 500 iterations), reducing the reported total loss to 1.7×10^{-3} , and generated u-, v-, and pressure-field visualizations.

PROJECTS

Secure Multi-Client Chat Application | C++, TCP/IP, OpenSSL

- Engineered a concurrent client-server chat application in C++ using TCP sockets and OpenSSL/TLS, supporting real-time private and group messaging over encrypted connections.
- Implemented multi-client concurrency with dedicated threads and mutex-based synchronization, managing shared client state and simultaneous socket communication.
- Built a graph-based friend recommendation system that ranks potential connections using mutual-friend relationships, with file-based persistence for users and social-graph data.

Stock Price Prediction using LSTM | Python, TensorFlow/Keras

- Developed a 2-layer LSTM model (32K+ parameters) using 4,529 AAPL records, 9 engineered features, and 60-day sequences for time-series forecasting.
- Trained for 50 epochs and evaluated 1,336 test sequences, achieving RMSE 31.28, MAE 25.12, MAPE 17.84, and 51.76 directional accuracy.

ACHIEVEMENTS

- Selected for the **Amazon ML Summer School 2025** through a competitive selection process. [View Certificate](#)
- Selected as a **Mess Committee Member**, Girls' Hostel—NIT Agartala (2026-27).

TECHNICAL SKILLS

Programming Languages: C, C++, Python, SQL.

Core CS: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Database Management Systems, Complexity Analysis.

Software Development: TCP/IP, Socket Programming, Client-Server Architecture, Multithreading.

Machine Learning: TensorFlow/Keras, Scikit-learn, Pandas, NumPy, LSTM, Physics-Informed Neural Networks, Feature Engineering, Data Preprocessing, Model Evaluation, Time-Series Forecasting.

Tools: GitHub, VS Code, Jupyter Notebook, Google Colab
